TIMINGS
A Off
B PIR Motion
C On
D On

FREQUENCY (SOUND)
1 Small animal
   (Rodents, small cats, birds, rabbits, etc)
2 Medium animal
   (Large cats, small dogs, etc)
3 Large animal
   (Large dogs, foxes, badgers, deer, etc)

BATTERIES
2 x 9v

AREA COVERAGE
Your Pest-Stop repeller will cover an approximate linear distance of 15m (50ft), in a 60° arc.

However, remember that the ultrasonic sound will be blocked by obstructions such as trees, bushes or garden sheds.
OUTDOOR USE

- Your Pest-Stop repeller is designed for outdoor use
- There is a rubber seal to stop water entering the battery compartment
- This means that your Pest-Stop repeller can be used outdoors
- However, to maximise life, we recommend installing in a sheltered location
- The optional power kit MUST only be plugged into a covered power socket

RESULTS - FAQs

Your Pest-Stop repeller should start to achieve results within 2-4 weeks of continuous use. If you are not experiencing the desired effects, consider...

- Try changing the frequency
- Try changing the timing
- Check that there are no obstructions stopping the sound reaching the animal
- Try repositioning the Pest-Stop repeller in a new location

Whilst most animals will learn to avoid the area where the uncomfortable sound can be heard, unfortunately there is always the possibility that individual animals won’t be effected by the high frequency sounds.

WALL MOUNTING

OPTIONAL POWER KIT

Your Pest-Stop repeller is designed to work with 2 x 9v batteries. This means that it can be positioned in any location without an electrical source. However, an optional ‘Power Kit’ (PS-UPK) is also available.

- The ‘Power Kit’ powers the repeller when plugged into a covered power supply
- REMEMBER that the ‘Power Kit’ MUST be plugged into a covered power supply
- A covered power supply is either an indoor socket, or an IP rated outdoor socket
